Description

This Video Separator is a signal booster and splitter that input video signal from a single source and then direct it to 4 analog signals video monitors. The signal boost allows you not only splitting the signal but also extend the signal to 210 feet distance. If you want to display the same information on many monitors at once, such as in different classrooms or at a demonstration, this product can perform incredibly well. Bandwidth is the term that is used to describe the signal capacity for data transmitted per unit of time. This unit has a bandwidth of 450MHz and that is almost 60 times greater than a simple TV signal. This huge bandwidth allows transmission of large amounts of information at a very high-speed rate, and thus one can use a very high-resolution setting of 2048x1536 in 24 or 32-bit true color mode.

* Supports 450 MHz video bandwidth

Audio & Video: 4-WAY SVGA SPLITTER BOX

- * Supports resolution up to 2048 x 1536 at 60Hz
- * Supports SVGA, VGA, XGA, and Multi-sync compliant monitors
- * Amplified video signals for distance up to 180Ft (60M)
- * Can be daisy-chained with multiple units generating more outputs
- * All metal casing
- * Input: DB15HD female connector
- * Output: 4 x DB15 female connector
- * Power supply included (DC6V)
